

## The distribution of rainfall over the land

---

By Andrew John Herbertson

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 36 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1901 Excerpt: . . . region. In the north of South America there is a brief break in the zenithal rainfall, the so-called veranito de San Juan, which usually takes place at the end of June, and represents the northern extension of the solstitial dry season of equatorial regions. It is very difficult to estimate the region where this dry St. Johns summer reduces the rainfall to less than 100 mm. (4 inches), and the only records giving a smaller amount are those of Bogota. The region of lower rainfall over the Llanos, and including the Bogotan plateau, must therefore be looked upon as a diagrammatic expression of the occurrence of the dry period, and not as a perfectly definite area. African Area. --In Africa hardly any rain falls south of the equator, except on the coastal regions north of Zanzibar and in Madagascar. Madagascar presents a great contrast as regards...

### Reviews

*This publication will never be effortless to begin on studying but extremely entertaining to learn. It is probably the most incredible publication I have gone through. I realized this ebook from my dad and he suggested this publication to learn.*

-- **Austin O'Connell**

*These sorts of pdf is the greatest publication readily available. It can be really intriguing through looking at time. You can expect to like how the blogger publishes this book.*
